

What is Respondus Lockdown Browser?

Last Modified on 10/16/2018 12:10 pm EDT

Respondus LockDown Browser is a custom browser that locks down the testing environment within a learning management system. The goal is to prevent cheating. When the LockDown Browser is active, a student will be unable to copy, print, access other applications, or visit other websites (with the exception of those that are preapproved by the instructor).
